DETAILED ACTION

- 1. This Office action is responsive to the amendment filed 7/26/93. Claims 1-28 are presented for examination.
- 2. Applicant and the assignee of this application are required under 37 CFR 1.105 to provide the following information that the examiner has determined is reasonably necessary to the examination of this application.

The examiner requests, in response to this Office action, any documentation known to qualify as prior art under 35 U.S.C. sections 102 or 103 with respect to the invention as defined by the <u>independent(s)</u> claims. That is, any prior art (including any documentation used to develop the disclosed/claimed subject matter, background art and any products for sale) similar to the claimed invention that could reasonably be used in a 102 or 103 rejection. This request does not require a search. Support for this request is derived from 37 CFR 1.56 and 1.105, however, it is not intended to interfere with or go beyond that **required** under 37 CFR 1.56 or 1.105.

The request may be fulfilled by asking the attorney(s) of record handling prosecution and the inventor(s)/assignee for references qualifying as prior art. A simple statement that the query has been made and no prior art found is sufficient to fulfill the request. Otherwise, the fee and certification requirements of 37 CFR section 1.97 are waived for those documents submitted in reply to this request. This waiver extends only to those documents within the scope of this request that are included in the applicant's first complete communication responding to this requirement. Any supplemental replies subsequent to the first communication responding to this

Art Unit: 2185

request and any information disclosures beyond the scope of this request are subject to the fee and certification requirements of 37 CFR section 1.97.

In the event documentation (e.g. newly submitted/previously submitted on an IDS, incorporated by reference or "common knowledge" generally found in the background section but not a publication) is determined to qualify as prior art, a discussion of relevant passages, figs. etc. with respect to the claims must be provided. That is, for each **independent** claim limitation (including structural and functional limitations linking claim elements) identify a corresponding prior art element by page, line and/or fig. Since applicant is most knowledgeable of the present invention and submitted art, a discussion of the reference(s) with respect to the instant claims is essential.

In the present disclosure, the Background section identifies several prior art devices and/or systems. In response to this Office action, the examiner requests a discussion of which, if any, independent claim limitations (claims 1,6,9,12,18, and 23) correspond to prior art elements in the background documentation. Since applicant is most knowledgeable of the present invention and the background art, a discussion of the background art with respect to the instant claims is essential. That is, for each claim limitation (including structural and functional limitations linking claim elements) identify a corresponding prior art element by page, line, and/or fig.

Additionally, the examiner requests a discussion of which, if any, present independent claim limitations correspond to prior art elements in the IDS documentation. For each claim limitation identify a corresponding prior art element by page, line, and/or fig. Again, this request is derived from 37 CFR 1.105 and will assist in prosecuting the application.

Application/Control Number: 10/648,582 Page 4

Art Unit: 2185

The examiner also requests, in response to this Office action, a showing of support for the following: All claim language (original independent claim(s) only) that does not have antecedent basis in the descriptive portion of the specification. That is, if support for a claim limitation(s) resides solely in the original claims, such limitation must be identified; Claim language added to <u>any</u> present claims on amendment and any new claims. Indicate support for each claim limitation (including structural and functional limitations linking claim elements) by specifically pointing to page(s) and line no(s). in the specification and/or drawing figure(s) and the corresponding limitation. This request is derived from 37 CFR 1.105 and will assist in prosecuting the application.

When responding to the Office action, applicant is advised to clearly point out the patentable novelty the claims present in view of the state of the art disclosed by the reference(s) cited or the objections made. A showing of how the amendments avoid such references or objections must also be present. See 37 C.F.R. 1.111(c).

When responding to this Office action, applicant is advised to provide the line and page numbers in the application and/or reference(s) cited to assist in locating the appropriate paragraphs.

This Office action has an attached requirement for information under 37 CFR 1.105. A complete reply to this Office action must include a complete reply to the attached requirement for information. The time period for reply to the attached requirement coincides with the time period for reply to this Office action.

Art Unit: 2185

In claim 18, the claimed step of "querying a size of a data block" corresponds to Brown's step performed in decision block 184 (Fig 4B). The receive buffer size is inspected

The claimed step of "creating a data block size estimate proportional to the size of the data block" corresponds to

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant should review the prior art not relied upon for its relevance to the instant claims.

Yamaguchi (5,568,635) teaches an area estimation section.

Begis et al. (6,678,812) teaches determining optimal transfer block size.

Riddle (5,920,732) teaches determining optimal block size.

Brown et al. (6046,817) teaches inspecting buffer size in decision block 184 (Fig 4B).

Any response to this action should be mailed to:

Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office

PO Box 1450

Alexandria, VA 22313-1450

or faxed to:

(571) 273-8300, (for Official communications intended for entry)

Or:
